## Getting Started with Genesys Interaction Recording

Welcome to Genesys Interaction Recording (GIR). GIR helps to optimize your workforce performance and customer experiences by allowing you to recod, save, and play back your customer interactions.

Each product and feature page will tell you how to install and configure the component to enable recording. Once everything is in place, you can record an interaction, then listen to it.

If you want to know more about GIR itself and where it fits into your Genesys solution, you can check out the following topics, or check out the videos:

- About Genesys Interaction Recording
- How Recording Works
- Architecture and Features

Genesys Interaction Recording (GIR) can be deployed in a single tenant environment or in a multitenant environment. To successfully deploy GIR you must following the instructions provided in the order that they appear.

- Deploy GIR in a Single Tenant Environment
- Deploy GIR in a Multi Tenant Environment

#### Videos

This high level overview of the GIR Architecture talks about the components that are involved with capturing, searching for, and playing back your recordings (6:48).

#### Important In the videos below, the GIR Voice Processor can be used instead of the Recording Processor Script (RPS).

#### Link to video

Or, you can also watch these shorter videos describing each component separately.
