Export Certificates

Export Certificates

Purpose: Describes using Microsoft Management Console to export digital certificates.

Contents

- **1 Export Certificates**
 - 1.1 Procedure
 - 1.2 Next Steps

Procedure

If you have generated a Windows certificate, as described in the "Certificate Generation and Installation" chapter of the *Genesys Security Guide*, you must use Microsoft Management Console to make the certificate usable by UCS, as follows:

1. From the Windows Start menu, select `Run`, then execute the `mmc` command to start Microsoft Management Console.
2. In the Trusted Publishers folder, select the certificate that you assigned to your host in the Genesys configuration environment. Right-click and select `Export` to launch a wizard.
3. Click `Next` in the first pane of the wizard.
4. Select `Yes`, export the private key.
5. Select `Personal Information Exchange - PKCS #12` and `Enable strong protection`.
6. Enter a password.
7. Enter a file name (such as `certificate.pfx`) and select the location to save it.

Next Steps

Configure UCS to use the certificate, as described in [Using TLS with UCS](#).
