Export Certificates

Export Certificates

Purpose: Describes using Microsoft Managment Console to export digital certificates.

Contents

- 1 Export Certificates
 - 1.1 Procedure
 - 1.2 Next Steps

User's Guide 2

Procedure

If you have generated a Windows certificate, as described in the "Certificate Generation and Installation" chapter of the *Genesys Security Guide*, you must use Microsoft Management Console to make the certificate usable by UCS, as follows:

- 1. From the Windows Start menu, select Run, then execute the mmc command to start Microsoft Management Console.
- 2. In the Trusted Publishers folder, select the certificate that you assigned to your host in the Genesys configuration environment. Right-click and select Export to launch a wizard.
- 3. Click Next in the first pane of the wizard.
- 4. Select Yes, export the private key.
- 5. Select Personal Information Exchange PKCS #12 and Enable strong protection.
- 6. Enter a password.
- 7. Enter a file name (such as certificate.pfx) and select the location to save it.

Next Steps

Configure UCS to use the certificate, as described in Using TLS with UCS.
