Custom Events

# Custom Events

The **Exceptions** dialog box, which opens from the Exceptions property, contains an **Event** button where you can define a custom event in addition to selecting a predefined event. Use this dialog box to define which exceptions or events to handle.

1. In the block, click opposite **Exceptions** under **Value**.
2. Click the ... button to bring up the Exceptions dialog box.
3. In the Exceptions dialog box, click **Event**.
4. In the resulting dialog box, name the event and click **OK**. The event name appears in the **Name** column.
5. When through in the dialog box, click **OK**.
6. Once a custom event is added to the list of exceptions in a block, you will see an exception port for this event (or exception) on the block, which you can now connect to another block to handle that special condition.
