Composer Help

Security Configuration

4/18/2025

Security Configuration

You have the option of configuring:

- A secure Transport Layer Security (TLS) connection between Composer and Universal Contact Server (UCS) during application design when connecting to Context Services.

- A secure TLS connection when connecting to Configuration Server during design time.

You can also configure:

- A security banner that displays when users establish a Configuration Server connection.

- An inactivity timeout. If a Composer user has authenticated with Configuration Server, Composer times out after a configurable number of minutes of inactivity.

- Both certificate-based and key-based authentication.

For information on configuring the above features, see the *Genesys Security Deployment Guide*.
