XML Preferences

You can also set XML File Preferences for both routing and voice applications: **Window** > **Preferences** > **XML** > **XML Files**. When specifying Encoding formats in the XML Preference page: encoding formats are applicable only for new File creation using the Template option: (**File** > **New** > **XML** > **XML File** > **Create XML File from an XML Template** > **Select XML Template**). This applies only to new XML, VXML, CCXML and SCXML files. Existing files within the Project will not get impacted.
