## Genesys Designer Help

Transaction List Block

## Transaction List Block

You can use the **Transaction List** block to assign transaction list values to variables. You can define a variable in the **Initialize** phase and then select it in this block and assign it a value from the transaction list.

Variables are assigned string values when **List**, **Item**, and **Key** are all specified, or key-value pairs if you only specify **List** and **Item** (for example, {Key1:value1, Key2:Value2}).

## Example
