# Working with Dashboards and Wallboards

Use Pulse dashboards and wallboards to display real-time reports within widgets, so that you can monitor your contact center to suit your needs.

Dashboards are for personal use, and provide drill-down reports and contain more detail than a wallboard.

Wallboards can broadcast information on a large screen for a team of people. You can use IFrame, Text, or KPI widgets on your wallboards.

## Add a dashboard or wallboard

To open or create a new dashboard or wallboard, click **Add a Dashboard**.

Then you can choose between a dashboard and a wallboard.

The wizard guides you through the rest of the steps.

Once a dashboard or wallboard is created you can edit the title and set other options, such as Alert

Notifications or the wallboard color theme. Select **Customize** from the dashboard menu to adjust settings.

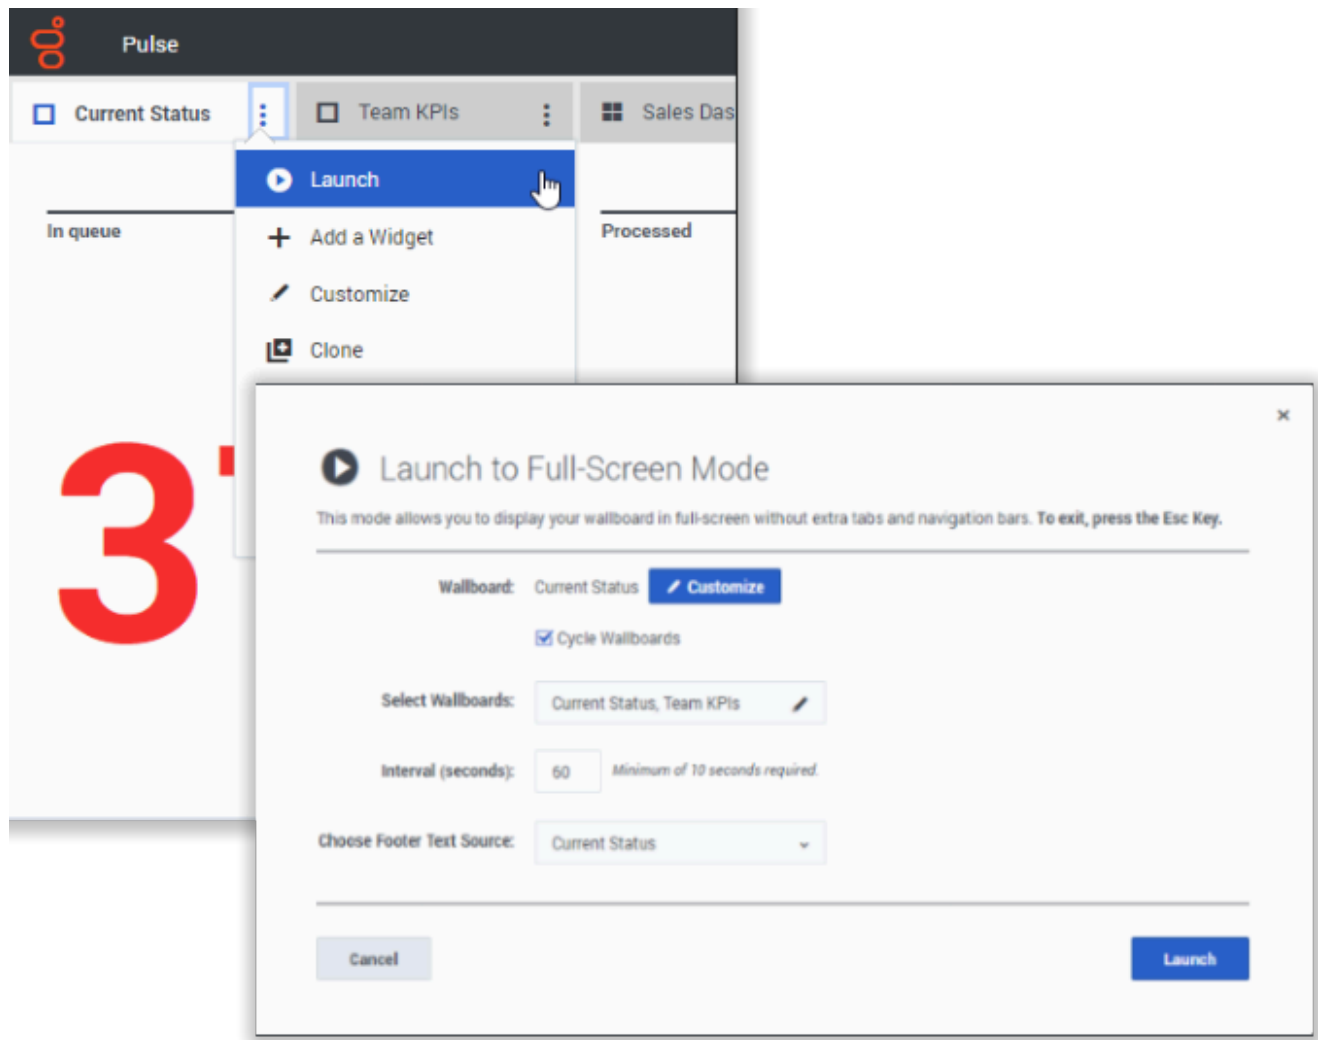

The screenshot shows the 'Customize (Current Status)' configuration window for a wallboard. It includes the following elements:

- Title:** 'Customize (Current Status)'
- Wallboard Name:** A text input field containing 'Current Status'.
- Description:** A text input field containing 'Optional'.
- Alerts:** A section titled 'If enable alert notifications in tab' with a 'Name' label and two buttons: 'Light' and 'Dark'.
- Header:** A section titled 'Customize the header to reflect the company branding' showing a preview of a red header bar with the text 'Current Status' and 'Powered by GENESYS™'.
- Header Color:** A color selection interface with a red color swatch and a text input field containing '#E67E22'.
- Header Text:** A text input field containing 'GENESYS™'.
- Display Size:** A label indicating '4 Rows by 6 Columns'.
- Buttons:** 'Cancel' and 'Save' buttons at the bottom.

## Display wallboard data in full-screen mode

Select **Launch** from the wallboard More menu to display the data in full-screen mode.

You can choose several wallboards to cycle. You can use pinned to the bottom **Text Widget** as a news ticker. This Footer Text Source (pinned Text Widget) will remain unchanged while wallboards are cycling.

## Manage shared dashboards and wallboards

To manage shared dashboards and wallboards select **Manage**.

From here you can perform actions on dashboards and wallboards, including assigning them to groups of users.

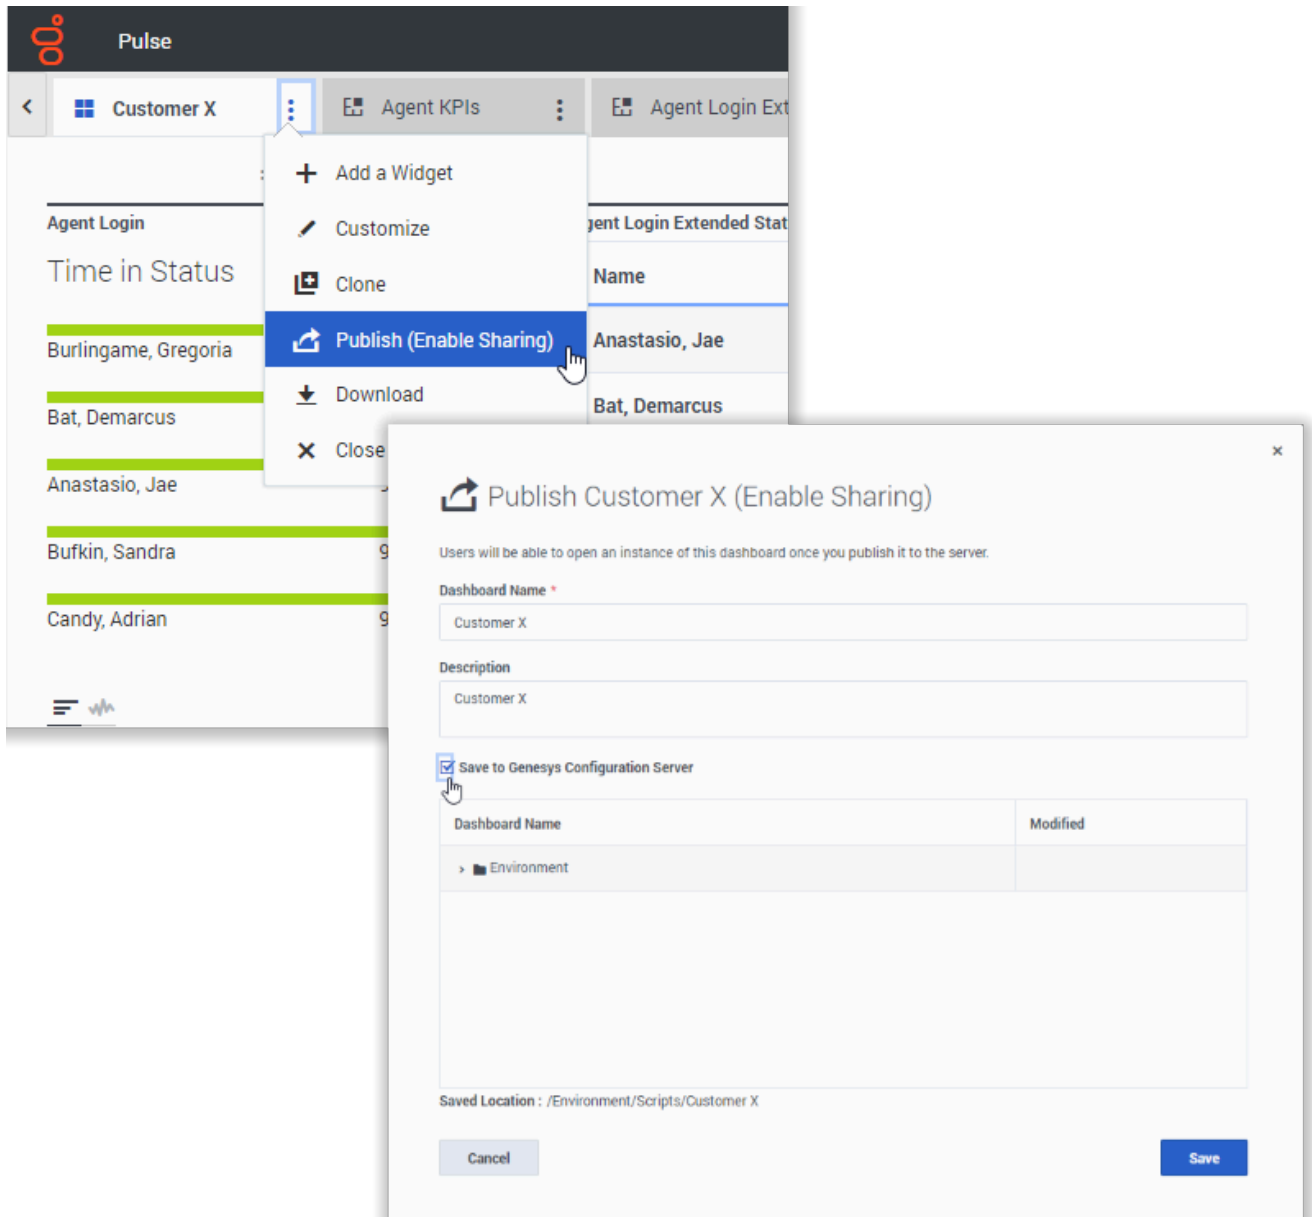

Genesys Pulse lists saved and shared items in a table and displays item details to the right.

### Tip

See [Widget Templates](#) to learn how to simplify widget creation.

Hide or share your custom dashboard or wallboard with other users

You can share your custom dashboard or wallboard with others (for example, with a user group such as Sales Team Leads). When you **Publish** or **Save As** from the more menu, you must select **Save to Genesys Configuration Server**, and choose the directory to save and share the dashboard with others. Be sure to give it a name specific to the user's needs.

Use Dashboard Management to hide your dashboard from others. Select a dashboard, click **Link to Configuration Manager** on the right under **Access Groups**, and set permission settings for people

who will view your dashboards.

### Important

To prevent others from using your dashboards, you need the GAX permissions: Access Configmanager; Read Scripts; and Create/Full Control of Scripts.

To save dashboards or wallboards to Genesys Configuration Server, you need Full Control access to the target directory.

Allow users to customize dashboards

Your Genesys Pulse users might want to modify their dashboards or wallboards. You can enable this by granting them the proper permissions.

In GAX, on the **Configuration Manager** page, under **Accounts**, go to **Roles** and find the role assigned to the user.

Edit the privileges granted by the **Role** on the **Assigned Privileges** tab in the **Pulse** section to allow following actions:

- **Pulse Manage Tabs**—User can launch and close dashboards and expand widgets to tab.
- **Pulse Edit Widget Display**—User can modify widget display options.
- **Pulse Manage Widgets**—User can create, remove, or modify all widget options.
