Configuration Server Configuration Options

This chapter describes configuration options and a configuration file for Configuration Server, and includes the following sections:

- [Setting Configuration Options](#)
- [Startup Options in Configuration File](#)
- [Runtime Options in Configuration Database](#)
- [Application Parameter Options](#)
- [Sample Configuration Server Configuration File](#)
- [Changes in 8.5.x](#)

Setting Configuration Options

You set Configuration Server configuration options in one of two ways:

- Using a configuration file for startup options
- Using Genesys Administrator

Warning

Configuration section names, configuration option names, and predefined option values are case-sensitive. Type them in the configuration file or Genesys Administrator exactly as they are documented in this chapter.

Using the Configuration File for Startup Options

Using a text editor, enter Configuration Server startup options directly in the configuration file. See [Startup Options in Configuration File](#) for descriptions of the startup options.

Using Genesys Administrator for Runtime Options

In Genesys Administrator, set Configuration Server configuration options in the Advanced View (Options) view of the Options tab of the Configuration Server Application object.

See [Runtime Options in Configuration Database](#) for descriptions of the runtime options. Refer to [Genesys Administrator Help](#) for additional information about the Options tab, and how to manage configuration options on it.
