Framework Deployment Guide

Starting and Stopping Framework Components

5/10/2025

Starting and Stopping Framework Components

You can start and stop a Framework component in any of the following ways:

- Use the **startup file** created by the installation script. This file can only be used to start the component, you must use one of the other ways to stop the component.
- Use the **Management Layer**.
- **Manually**, specify command-line parameters.
- Use the **Windows Services Manager**, available only in Windows.

Warning

If you are using SNMP, you must start or restart SCS immediately after the SNMP <license option> has been (re)activated. Otherwise, you will lose all SNMP functionality until SCS has been (re)started.
