Log Format

Log Format

A log record is a data record that stores information communicated in a single log event. Log records are stored in the Centralized Log Database in the following tables:

- G_LOG_MESSAGES
- G_LOG_ATTRS

G_LOG_MESSAGES

The G_LOG_MESSAGES table consists of one row for each log message. The structure of the table is described in the following table: [+] **Show table structure**

Structure of the G_LOG_MESSAGES Table

Field Name	Туре	Description
ID	numeric	The unique identifier of the record stored in this table.
MESSAGE_ID	integer	The unique identifier of the event.
TIMEGENERATED	datetime	The time when the record was written to the database, in GMT format.
TIMEWRITTEN	datetime	The time when the record was written to the database, in GMT format.
		The log level of the reported event. This field can have one of the following values:
PRIORITY	integer	2—Trace-level events. The Trace level of logging reports the details of communication between the various solution components and contains information about the processing steps for each interaction by each solution component. 3—Interaction-level events. The Interaction level of logging reports the details of an interaction process by solution components that handle interactions and contains information about the processing steps for each interaction by each solution component. 4—Standard-level events. The Standard level of logging contains high-level events that report both major problems and normal operations of in-service solutions. 5—Alarm-level events. The Alarm level of logging reports the events related to

		alarm detection, processing, and removal.
ORIGIN	integer	Reserved for future use.
CATEGORY	integer	Identifies the type of the log record and can have one of the following values: O—for application-related log events 2—for audit-related log events
DATALEN	integer	Reserved for future use.
APPDBID	integer	Reserved for future use.
АРРТҮРЕ	integer	The type of application that reported the event. Refer to APPTYPE Field Values for a list of the valid values.
APPNAME	string	The name of the application, as specified in the Configuration Database, that reported the event.
HOSTNAME	string	The name of the host, as specified in the Configuration Database, on which the application that reported the event runs.
MESSAGETEXT	string	Text defining and describing the event.

APPTYPE Field Values

The following table provides the valid values for the **APPTYPE** field in the **G_LOG_MESSAGES** table. **[+] Show values**

Application Types for APPTYPE Field in the G_LOG_MESSAGES Table

Value	Application Type
00	Applications of all types when reporting log events common to all Genesys applications

G_LOG_ATTRS

Some log events also contain Extended Attributes that an application may attach for audit purposes. The G_LOG_ATTRS table contains one row for each extended attribute. The structure of the table is described in the following table:

[+] Show table structure

Structure of the G_LOG_ATTR Table

Field Name	Туре	Description
ID	numeric	The unique identifier of the record stored in this table.
LRID	numeric	The unique identifier of the log record stored in the G_LOG_MESSAGES table to which this extended attribute belongs.
MESSAGE_ID	integer	The unique identifier of the event.
ATTR_NAME	string	The name of the extended attribute.
ATTR_VALUE	string	The value of the extended attribute in string format.
