Genesys Administrator Extension Deployment Guide

Customizing the GAX Homepage

Customizing the GAX Homepage

When Genesys Administrator Extension is launched, it opens to the default homepage view. The default view is a placeholder that you can customize to suit your business needs.

The homepage is an HTML document (**home.html**) and a style sheet (**home.css**) that are stored in the following location after you install GAX: **<gax-installation-dir>\webapp\plugins\gax-core\home**

The file **home.html** is a document fragment. It does not contain all of the standard HTML tags. The default, temporary content is the following:

```
<div class="home-container">
  <h1>Welcome to ${GENESYS_ADMINISTRATOR_EXTENSION}</h1>
  <p>This is a placeholder page for the Home module. You can customize it by editing
home.html and home.css.</p>
</div>
```

You can change the contents of this page to suit your requirements.

The style sheet file can also be modified to suit your requirements. The default contents are as follows:

```
.home-container {
  padding: 16px;
  height: 400px;
  background-image: url(i/background.jpg);
  background-repeat: no-repeat;
}Genesys recommends that you use a class prefix like "'home-'" to prevent clashes with
class names that are used elsewhere within GAX.
```

The images that are referenced by the CSS file are in the folder that is named "i" in the same folder as **home.css**. You can store as many image files as you require in this folder. Reference your images in the CSS file.

After you edit the **home.html** file, click **Refresh** in the GAX interface to display your updates.
