Genesys Administrator Extension Help

Solution Deployment

12/20/2025

Solution Deployment

Solution Deployment enables the user to fully deploy **solution definitions** and **installation packages** (IPs) to local and remote locations. This includes installation and configuration of all necessary applications and updates to existing multi-tenant applications, where appropriate.

A **solution definition** consists of an XML file that dictates the steps to install, upgrade, or configure **IPs** and system configurations to deploy a solution successfully.

Solution Deployment requires that the Genesys Deployment Agent (GDA) be installed on all source and target hosts. Refer to the **Solution Deployment Prerequisites** section of the *GAX Deployment Guide* for more information.

Important

Starting from Local Control Agent 8.5.100.31, Genesys Deployment Agent (GDA) is no longer installed and supported as part of Management Framework and therefore all functionality using GDA (including the installation of IPs) is deprecated.

Solution Deployment includes:

- Managing Installation Packages (IPs)
 - **Installation packages**
 - View **Deployed IPs**
- Managing Solution Definitions
 - **Solution definitions**
 - View a list of **deployed solutions**
- **Managing Privileges**
