http-security Section

Contents

Configures HTTP security for Co-browse resources.

disableCaching

Default value: `false`
Valid Values: `true, false`
Changes take effect: Immediately

Disables HTTP client / proxy caching for all resources including static resources. When the option value is set to `true`, ZAP proxy does *not* generate the following warnings:

- `Incomplete or no cache-control and pragma HTTPHeader set (Low Risk)`

- `Secure page browser cache (Medium Risk)`

When the option is set to `false` or has no set value:

- Static resources are cached according to the option values set in the static-web-resources section.

- Dynamic data exchange is not cached.

- Proxied resources are cached in accordance with caching policy of the original resources.
