Designer Metrics

# Designer Metrics

The Designer folder contains numerous metrics that you can use to build Designer-related reports.

Note the following:

- Unless other wise noted, metrics that show time, display a whole integer representing the number of seconds.
- For detailed information about the different metric types, see [Project terminology and concepts](#).

## Important

Objects in each folder or subfolder are designed to be used together to create reports. Avoid mixing attributes and metrics from multiple folders into your reports. One exception to this rule is objects in the Time folder; Time attributes can be used in any report, and most reports include at least one attribute from the Time folder.

The following Metrics are available in this folder and are described on this page.

<b>Metric name: Offered</b>	<b>Folder:</b> Designer > Survey
<b>Description:</b> The total number of times that interactions were received or initiated by this agent (for Agent reporting), or agents who belong to this agent group (for Agent Group reporting).	

The count includes interactions that were abandoned while inviting, handling attempts that the agent rejected, and warm consultations and conferences that the agent received. This count excludes simple consultations, whether they were initiated or received. For AGT\_AGENT\_QUEUE records, this metric relies on the value of the **short-abandoned threshold** as configured in the **[agg-gim-thld-ID-IXN]** section.

**Metric name: Responses**

**Folder:**

Designer > Survey

**Description:** The definition of this metric depends on the media type:

- For voice and chat media, the total number of customer interactions that were accepted by handling resources.
- For email, the total number times that handling resources (agents) created outbound replies that might or might not have been sent. One handling resource can create multiple replies; this metric's value reflects each reply.
