Genesys Info Mart Deployment Guide

IDB Tables Accessed by Genesys Info Mart

IDB Tables Accessed by Genesys Info Mart

This page lists the IDB tables that the Genesys Info Mart extraction jobs access. The type of data that is extracted depends on the role that is configured for the DAP. For more information about configuring the DAPs that enable Genesys Info Mart to access IDB, see [Configuring Required DAPs](#) and the DAP role option.

Important

The following table lists only those IDB tables from which Genesys Info Mart actually extracts data. Genesys Info Mart does not populate all of the Global Interaction Database (GIDB) tables in the Info Mart database schema. For more information about the GIDB tables, see [Info Mart Database](#).
