# Genesys Info Mart Physical Data Model for a Microsoft SQL Server Database

Table CTL\_UDE\_KEYS\_TO\_DIM\_MAPPING

# Table CTL\_UDE\_KEYS\_TO\_DIM\_MAPPING

## Description

**Modified:** 8.5.003 (in Oracle, fields with VARCHAR data types use explicit CHAR character-length semantics)

In partitioned databases, this table is not partitioned.

This table provides information for mapping user-data KVPs that are stored as dimensions to facts that are stored in the INTERACTION\_RESOURCE\_FACT table. The mapping table is populated with a special script during the Genesys Info Mart deployment and can be updated when user-data storage requirements change. Each row defines mapping between the primary key of a dimension table and a foreign key in the IRF\_USER\_DATA\_KEYS table.

### Tip

To assist you in preparing supplementary documentation, click the following link to download a comma-separated text file containing information such as the data types and descriptions for all columns in this table: [Download a CSV file](#).

**Hint:** For easiest viewing, open the downloaded CSV file in Excel and adjust settings for column widths, text wrapping, and so on as desired. Depending on your browser and other system settings, you might need to save the file to your desktop first.
