Genesys Info Mart Physical Data Model for an Oracle Database

What's New in the Documentation

12/19/2025

What's New in the Documentation

The following information is new or has changed significantly since earlier versions of this document. The most recent changes appear first.

Important

Starting with release 8.5.014.14 on August 30, 2019, Genesys Info Mart is part of 9.0. This document is valid only for the 8.5 releases of this product before Genesys Info Mart was part of 9.0. For 8.5 releases of Genesys Info Mart after August 30, 2019, see the Current version of this document [for your RDBMS](#).

- The [GPM_DIM1](#) dimension table and nine new columns in the [GPM_FACT](#) table have been added in release 8.5.014.09, to store the new KVPs for enhanced reporting on Genesys Predictive Routing (GPR). In addition, the description of the GPM_RESULT column in the [GPM_RESULT](#) table has been updated to include additional values. The GPM_DIM1 dimension table has been added to the [list of tables included in Data Export](#).
- The [CHAT_THREAD_FACT](#) and [MEDIA_ORIGIN](#) tables have been added in release 8.5.014.09, to support Chat Thread reporting. In addition, a new column in the [CHAT_SESSION_FACT](#) table, THREAD_ID, has been included for future use. The CHAT_THREAD_FACT and MEDIA_ORIGIN tables have been added to the [list of tables included in Data Export](#), as well.
- A note has been added to the [ANCHOR_FLAGS](#) table description to clarify that the data stored in this table doesn't apply to new Chat Thread reporting.
- The END_DATE_TIME_KEY and RESOURCE_GROUP_COMBINATION_KEY were added to the [SM_MEDIA_NEUTRAL_STATE_FACT](#) table in release 8.5.013.06.
- The [CDR_FACT](#) and [CDR_DIM1](#) tables have been added in release 8.5.013.06, in preparation for support of Call Detail Record (CDR) reporting. The CDR_FACT table has been added to the [list of tables included in Data Export](#), as well. In the [CTL_GDPR_HISTORY](#) table description, the CDR_FACT table columns ANI and DNIS have been added to the list of columns that potentially contain personally identifiable information (PII).
- Missing or incorrect partition keys have been corrected in the list of partitioned GIDB tables on the [Info Mart Partitioning](#) page.
- The following new tables have been added in release 8.5.012.15, to store data from CX Contact about contact list records that were suppressed from an outbound campaign. The LDR_* tables have been added to the [list of tables included in Data Export](#) as well.
 - [LDR_FACT](#)
 - [LDR_LIST](#)
 - [LDR_CAMPAIGN](#)
 - [LDR_POSTAL_CODE](#)
 - [LDR_DEVICE](#)
 - [LDR_RECORD](#)
 - [LDR_GROUP](#)
- In the [CTL_GDPR_HISTORY](#) table description, the LDR_FACT table columns CLIENT_ID and CONTACT_INFO have been added to the list of columns that potentially contain personally identifiable information (PII).
- Descriptions have been added for the five COBROWSE_* tables in preparation for future support for Co-browse reporting. The COBROWSE_* tables have been added to the [list of tables included in Data](#)

Export as well.

- Information about the Data Export capability has been expanded on the [About Data Export Capability](#) page, as a result of Genesys Info Mart adding on-premises support for this capability in release 8.5.011.22.
- The GSW_CALL_TYPE column has been added to [IRF_USER_DATA_GEN_1](#).
- A new page, [Summary of Info Mart Schema Changes](#), summarizes the changes that have occurred in the Info Mart schema since release 8.1. The changes can be sorted or filtered by release, table, column, or type of change (table added, column modified, and so on).
- The following tables have been added, to support the reporting on chat session and chat bot activity that was introduced in release 8.5.011:
 - [CHAT_SESSION_FACT](#)
 - [CHAT_SESSION_DIM](#)
 - [BGS_SESSION_FACT](#)
 - [BGS_SESSION_DIM](#)
 - [BGS_BOT_DIM](#)
 - [BGS_BOT_NAME_DIM](#)
- The START_DATE_TIME_KEY in the [GPM_FACT](#) table was made part of the composite primary key, even in nonpartitioned databases.
- To cover support for employee General Data Protection Regulation (GDPR) requests introduced in release 8.5.010.16, the descriptions of the [CTL_GDPR_HISTORY](#) table and columns have been extended.
- The UPDATE_AUDIT_KEY column was added to the following tables in release 8.5.010.16:
Extension:DynamicPageList (DPL), version 2.01 : Warning: No results.
- To support GDPR compliance, a description of the [CTL_GDPR_HISTORY](#) table has been added.
- For support of alternative data streams:
 - A new column, [HWM_VALUE2](#) has been added to the [CTL_TRANSFORM_HISTORY](#) table. The [AUDIT_KEY](#) column was added in a previous release.
- To extend support for Callback reporting:
 - Two new dimension tables, [CALLBACK_DIAL_RESULTS](#) and [CALLBACK_DIM_4](#) have been added. Lists of tables, indexes, and references—including the [list of tables included in Data Export](#)—have been updated to include the new tables.
 - The following new columns have been added to the [CALLBACK_FACT](#) table:

CALLBACK_DIAL_RESULTS_KEY	EWT_WHEN_REJECTED	PRIORITY_WHEN_C_CONNECTED
CALLBACK_DIM_4_KEY	FIRST_OUT_I_XN_ID	PRIORITY_WHEN_CB_ACCEPTED
CUSTOMER_ANI	LAST_OUT_I_XN_ID	SERVICE_END_TS
DIAL_1_TS through DIAL_5_TS	ORIGINATION_I_XN_ID	WAITED_BEFORE_OFFER_TIME
EWT_THRESHOLD_WHEN_OFFERED	ORS_SESSION_ID	
EWT_WHEN_LAST_DIAL	POS_WHEN_LAST_DIAL	
	PRIORITY_WHEN_A_CONNECTED	
- The default value has been removed from [GPM_FACT.MESSAGE](#).
- To support reporting on Genesys Predictive Routing, descriptions of four new **GPM_*** tables have been added:
 - [GPM_FACT](#)

- [GPM_RESULT](#)
- [GPM_PREDICTOR](#)
- [GPM_MODEL](#)

Lists of tables, indexes, and references—including the [list of tables included in Data Export](#)—have been updated to include the new tables.

- To support reporting on interaction flows that involve applications developed with Genesys Designer, for which support is available in certain Genesys Engage cloud deployments:
 - Descriptions of the SDR_* tables have been added to this document.
 - Error code 26 has been added to [INTERACTION_FACT.STATUS](#) and [STG_TRANSFORM_DISCARDS.CODE](#)
- For Genesys Callback support, descriptions of the following columns have been updated to indicate new, additional values:
 - [INTERACTION_TYPE.INTERACTION_SUBTYPE](#) (OutboundCallback) and [INTERACTION_SUBTYPE_CODE](#) (OUTBOUNDCALLBACK)
 - [TECHNICAL_DESCRIPTOR.TECHNICAL_RESULT](#) (Deferred and Incomplete) and [TECHNICAL_RESULT_CODE](#) (DEFERRED and INCOMPLETE)
 - [TECHNICAL_DESCRIPTOR.RESULT_REASON](#) (CallbackAccepted) and [RESULT_REASON_CODE](#) (CALLBACKACCEPTED)
- Description of a new column, [USERDATA_FLAG](#), has been added to the MSF table. The column indicates that user data is attached to the MSF record. This flag facilitates an unambiguous join between the MSF and fact extension tables to retrieve correct user data that is attached during mediation.
- A new fact table, [SM_MEDIA_NEUTRAL_STATE_FACT](#), has been added to support reporting on media-neutral agent states. (The table has not yet been added to the Facts subject area diagram.)
- The new user-data propagation rule, IRF_INITIAL, has been added to the list of valid values for the [PROPAGATION_RULE](#) column in the CTL_UD_TO_UDE_MAPPING control table.
- [ANCHOR_FLAGS](#) table:
 - Description of a new flag, [CUSTOMER_LEFT_FIRST](#), has been added. The flag indicates which party ended a chat session.
 - The value in the following columns will always be 0 unless populate-thread-facts = true:
 - [FIRST_ENGAGE_FOR_AGENT_THRD](#)
 - [FIRST_REPLY_FOR_AGENT_THRD](#)
 - [FIRST_ENGAGE_THRD](#)
- A note has been added to the [MEDIATION_SEGMENT_FACT \(MSF\)](#) table description that, starting with release 8.5.003, Genesys Info Mart populates an MSF record for the starting Interaction Queue of an Inbound Interaction, even if populate-mm-ixnqueue-facts is configured to false.
- [INTERACTION_RESOURCE_FACT \(IRF\)](#) table:
 - Descriptions of two new columns, [FOCUS_TIME_COUNT](#) and [FOCUS_TIME_DURATION](#), have been added. These columns enable reporting on the time that a particular interaction has been in focus (that is, actively being processed) on the agent desktop. If data regarding agent's focus time is provided by the agent desktop for this particular interaction, the count is increased in the FOCUS_TIME_COUNT column; otherwise, the value is 0. FOCUS_TIME_DURATION indicates the total time that the agent spent actively processing the interaction, as reported by the agent desktop.
 - Descriptions of two new columns, [ASM_COUNT](#) and [ASM_ENGAGE_DURATION](#), have been added.

These columns enable reporting on the time that the engaged agent is waiting to be connected to the customer (ASM engage duration) separately from regular talk time. The columns are populated only in Outbound VoIP environments, with Outbound Contact campaigns running in an ASM dialing mode, if the new configuration option, *No results*, is set to true

- The **ANCHOR_FLAGS_KEY** column description has been updated to account for the role this column now plays in indicating which party ended a chat session.
- Clarification has been added that in release 8.5.004, the name of the **IRF_ANCHOR_SENT_TS** column (which had been changed from **IRF_ANCHOR_DATE_TIME_KEY** in release 8.5.003) was further changed to **IRF_ANCHOR_TS**. The purpose of the column has been expanded. For chat interactions, the column now stores the time when the customer left the chat, or the time when the agent stopped the chat session, if data about the party that ended a chat session is available from Interaction Concentrator.
- Clarification has been added that in release 8.5.003, the name of the **IRF_ANCHOR_DATE_TIME_KEY** column was changed to **IRF_ANCHOR_SENT_TS**. For offline multimedia interactions, this field was populated with the time when the first response left the contact center. This field was populated only if **IRF.IRF_ANCHOR** had a value of 2. This field was set to NULL for all other IRFs that were associated with the same interaction.
- The description of a previously reserved column, **LAST_INTERACTION_RESOURCE**, has been updated. The column is supported for voice interactions in release 8.5.003 and is supported for all media types starting with release 8.5.004. This field is set to 1 for a single IRF out of all IRF records that are associated with a given interaction, to indicate the last resource to enter the interaction. This field is set to 0 for all other IRFs that are associated with the same interaction.
- **CONS_INIT_TALK_COUNT**, **CONS_RCV_RING_COUNT**, **CONS_RCV_RING_DURATION**, **CONS_RCV_TALK_COUNT**, and **CONS_RCV_TALK_DURATION** now also apply to chat consultations.
- The **CUSTOMER_*_COUNT** and **CUSTOMER_*_DURATION** metrics that specifically exclude voice and email consultations (for example, **CUSTOMER_RING_COUNT**) also exclude chat consultations.
- A note has been added to **CONS_INIT_TALK_DURATION** to confirm that, even if **CONS_INIT_TALK_COUNT** is nonzero, **CONS_INIT_TALK_DURATION** does not apply to chat consultations to avoid double-counting, because the agent who initiated the consultation continued to be active in the chat with the customer for the whole time.
- A newly introduced value, Person, has been added to the list of values for the **RESOURCE_.RESOURCE_SUBTYPE** column.
- In the **INTERACTION_TYPE** table, InternalConferenceInvite (and **INTERNALCONFERENCEINVITE**) have been added to the **INTERACTION_SUBTYPE** (and **INTERACTION_SUBTYPE_CODE**) columns.
- **CREATE_AUDIT_KEY** and **UPDATE_AUDIT_KEY** columns have been added in the **IRF_USER_DATA_CUST_1**, **IRF_USER_DATA_GEN_1**, and **IRF_USER_DATA_KEYS** tables.
- In the **TECHNICAL_DESCRIPTOR** table, IntroducedTransfer (and **INTRODUCEDTRANSFER**) have been added to the list of possible values in the **RESULT_REASON** (and **RESULT_REASON_CODE**) and **ROLE_REASON** (and **ROLE_REASON_CODE**) columns.
- In the information about **Info Mart Partitioning**, the **GIDB Fact Tables** section notes that two options introduced in release 8.1.402.07, **partitioning-interval-size-gidb-mm** and **partitioning-interval-size-gidb-ocs**, enable you to tailor partition sizes to suit the characteristics of your deployment, to improve performance.
