# Genesys Info Mart Physical Data Model for a PostgreSQL Database

Table `SDR_EXIT_POINT`

# Table SDR\_EXIT\_POINT

## Description

**Introduced:** 8.5.001. Supported in Genesys Engage cloud deployments only.

**Modified:** 8.5.010 (in Microsoft SQL Server, data type for APPLICATION\_EXIT\_POINT modified in single-language databases)

In partitioned databases, this table is not partitioned.

This dimension table enables Session Detail Record (SDR) facts to be described based on the point at which the self-service phase completed and the VoiceXML application exited.

### Tip

To assist you in preparing supplementary documentation, click the following link to download a comma-separated text file containing information such as the data types and descriptions for all columns in this table: [Download a CSV file.](#)

**Hint:** For easiest viewing, open the downloaded CSV file in Excel and adjust settings for column widths, text wrapping, and so on as desired. Depending on your browser and other system settings, you might need to save the file to your desktop first.

## Column List

### Legend

Column	Data Type	P	M	F	DV
ID	integer	X	X		
APPLICATION_EXIT_POINT	varchar(50)		X		NO_VALUE
CREATE_AUDIT_KEY	numeric(19)		X	X	

## Table SDR\_EXIT\_POINT

---

### ID

The primary key of this table.

### APPLICATION\_EXIT\_POINT

**Modified:** 8.5.010 (in Microsoft SQL Server, data type modified in single-language databases)  
The point reached in the Designer application when the self-service phase completed and the application exited.

### CREATE\_AUDIT\_KEY

The surrogate key that is used to join to the CTL\_AUDIT\_LOG control table. The key specifies the lineage for data creation. This value can be useful for aggregation, enterprise application integration (EAI), and ETL tools — that is, applications that need to identify newly added data.

## Index List

CODE	U	C	Description
I_SDR_EXIT_POINT	X		Ensures that the combinations of values that are stored in the dimension table are unique.

## Index I\_SDR\_EXIT\_POINT

Field	Sort	Comment
APPLICATION_EXIT_POINT	Ascending
