# Service Management Help

Genesys Mobile Services (GMS) includes a Service Management User Interface, where you can manage services and also access dedicated interfaces for Callback and Context Services.

Before you can access this UI, first install GMS. See the deployment instructions [here](#) and configure the new panels in the [features](#) section of your GMS configuration.

Note that, to work properly, this UI requires access to the following URLs:

`http://<GMS Local Host>:8080/genesys/1/admin/*`

Make sure to enable this access through your firewall and security if needed.

## Monitor

The **Monitor** tab (former Admin UI) and the **Tools** menu give you access to an administrator console, where you can:

- **Monitor** your GMS nodes
- **Load and manage** service templates
- **Create resource groups and patterns**
- **Run reports**
- **Access samples**
- **Download DFM files**
- **Retrieve snippets** for your jetty-http.xml file
- Manage the **exception list** for Callback services

## Services

The screenshot displays the 'Services' tab in the Service Management UI. The left sidebar contains a list of services: 'Callback', 'Callback Delayed' (selected), 'Capacity', 'Get', 'Match Interaction', and 'Request Access'. The main area shows the configuration for 'Callback Delayed'. At the top, there is a search bar and a 'Select All' button. Below this is a table with columns 'Name', 'Value', and 'Description'. The table contains several rows, including a row for '\_customer\_number' with a description about matching calls with service data. Other rows include '\_service' with a value of 'callback', and '\_type' with a value of 'ors'. There are also expandable sections for 'Chat (1)' and 'General (29)'. The bottom right corner of the interface shows the version 'Genesys Mobile Services 8.5.200.00.b.866'.

Name	Value	Description
_customer_number		Request Parameter - Customer's to match the call with service data set to USERORIGINATED. Also u connection with the customer w USERTERMINATED.This is a rec use in REST queries.
_service	callback	
_type	ors	

The **Services** tab is the user-friendly, web-based interface that is intended to be used by administrators and supervisors to:

- Add, delete, and modify a GMS service Agent Capacity

## Office Hours

Genesys Mobile Services 8.5.200.00.b.86

The **Office Hours** tab is the user-friendly, web-based interface that is intended to be used by administrators and supervisors to:

- Manage Call Center **Office Hours** and holiday schedules.

## Callback

If you **installed and configured** Callback, this interface enables you to:

- **Create** a Callback record
- Manage your callbacks

## Context Services

Business Attributes

Media type (Started)	any
----------------------	-----

Genesys Mobile Services 8.5.111.1

If you **installed and enabled** Context Services, the Context Services interface enables you to:

- **Search** for services
- **Manage** your services
- **Create** a service, state, or task
- **Complete** a service, state, or task
- Delete a service

## Journey Timeline

If you **installed and enabled** Context Services, the Journey Timeline interface enables you to:

- **Search** and select a customer
- **Visualize** the customer's journey timeline
- Display **states and tasks**
- Display **details** related to service and state Selection

## Learn About Scenarios

GMS provides service templates and their **scenarios** that you can load in the Mobile Engagement UI, and then access through REST queries. All callback related scenarios are detailed in the **Callback Solution Guide**.

# Enable Logging in the UI

```

The Service Management UI can provide detailed logs by configuring the following options in the GMS Configuration:

- enable-logger = `true` to activate DEBUG and INFO traces in the console.
- enable-logger-error = `true` to activate ERROR traces in the console.

## Help

### Introduced in 8.5.202

If you configure `enable-contextual-help= true`, the  icon of the Service Management UI opens a Contextual Help panel. This panel displays help pages, including videos and images, related to the active panel in the UI. It also includes search features and related topics.
