Genesys Rules System Deployment Guide

Creating an Application Cluster in Genesys Administrator

12/18/2025

Creating an Application Cluster in Genesys Administrator

Important

If you do not require the auto-synchronization feature available in release 8.5.2, you can continue to use the cluster configuration for 8.5.1—click [here](#) for details. Only Genesys Rules Engine (GRE) supports the auto-synchronization feature.

Purpose

To create an application cluster in Genesys Administrator to which rules packages can be deployed.

Procedure

1. Import an application template of type `Genesys_Rules_Engine_Application_Cluster`, if one does not already exist in your environment.
2. Create a Genesys Administrator application of type `Genesys_Rules_Engine_Application_Cluster`.
3. Go to **Provisioning > Environment > Applications**. If required, navigate to the folder in which you want to store the new Application object.
4. Open the **Tasks** panel, if necessary, and click **Create Application** in the **Create** section.
5. Follow the steps in the **Create New Application** wizard. Make sure to select Genesys Rules Authoring Tool (GRAT) server as the Host in **Server Info** section.
6. Add as connections to this cluster application the engine applications you wish to treat as a cluster. For each connection be sure to select the default port ID for the Rules Engine Web Application (either GRE or Genesys Web Engagement).
7. Add the cluster application as a connection to the GRAT application.
8. Save the changes.
