Third-Party Recording with MCP and RM

[Return to Supplement Table of Contents](#)

SUMMARY: A new configuration option enables MCP to use the same Resource Manager for third-party recording that was used for incoming requests. (GVP-21310)

Option: `userouteonrecording`

Section: `sip`

Valid Values: `true` or `false`

Takes effect: immediately, on a per-session basis.

- Set to `true` to specify that for third-party recording, MCP will use the same Resource Manager that was used for incoming requests, which increases the likelihood of reaching an active Resource Manager.
Note: This setting overrides `vmrecorder.sip.routeset`.
- Set to `false` to specify that MCP use `vmrecorder.sip.routeset` if present. Otherwise, MCP will not set the Route header.
