- API Commands
- API Events

Overview

App is the main controller for Genesys Widgets and has no UI. It controls all startup routines, global configurations, Extensions, executes the onReady event, and distributes changes to theme, language, mobile mode, and other application-wide effects.

Usage

App's main interface is its configuration. You set all global defaults using the window._genesys.widgets.main property. App also has a few commands you can use to change the language and theme.

Customization

App itself cannot be customized but its configuration options affect all widgets.

Mobile Support

App has built-in mobile detection and can automatically notify all widgets to switch to mobile mode. You can also control this manually.
