Description

The event resource contains information related to a Business or System event that occurred on a specific web page at a given time. Two types of event can be issued:

- **System** events are constant and cannot be customized. There are two groups of System events:
 - Visit related (VisitStarted, PageEntered, PageExited);
 - Identity related (SignIn, SignOut, UserInfo).
- **Business** events are custom events that you can define within the DSL. See [Managing Business Events](#) for details.

The possible event names are listed in the following table:

Name	Type	Description
VisitStarted	System	Generated by the Browser Tier when the visitor starts visiting the website and enters the first page. It creates a new visit resource and then all the pages visited by the visitor are associated with this visit resource.
PageEntered	System	Generated by the Browser Tier when the visitor enters a page. The Backend Server creates a page resource which is associated with the visit. The page resource can be associated with an identity and a session, according to the identification scope of the visitor.
PageExited	System	Generated by the Browser Tier when the visitor exits a page. The Backend Server updates page resource accordingly. If the visitor comes back to the page, a new page resource is created.
SignIn	System	Generated by the Browser Tier when the visitor signs in (or is authenticated with the company web portal). It captures the identification information processed to authenticate the visitor, for instance, the e-mail address used to login. When the Backend Server receives this event, it updates or creates the identity resource associated with

Name	Type	Description
		the identifier. Additionally, it creates a new session with a unique sessionID across the visit, which becomes the new active session for the current visit.
SignOut	System	Generated by the Browser Tier when the visitor signs out. The end date of the session resource is updated and the session is no longer the visit's current active session.
UserInfo	System	Generated when the Browser Tier submits information about the visitor. This event occurs when the visitor is recognized or updates his or her profile information.
Timeout or InactivityTimeout	Business	Default business event with Timeout set to 10 seconds. Generated when the visitor's mouse is no longer moving. This Business event needs customization through the DSL rules. See Managing Business Events for details.
Search	Business	Default business event. Generated when the web visitor is searching on the website. This Business event needs further DSL customization. See Managing Business Events for details.
<i>Custom name</i>	Business	Custom business event created through DSL customization. See Managing Business Events for details.

Resource Details

Field	Type	Mandatory	Description
eventID	string	yes	The unique ID<ref name="guid"> GUID (Globally Unique Identifier) </ref> of the event resource.
eventName	string	yes	Name of the event. See the Description section for further information.

Field	Type	Mandatory	Description
eventType	System, Business	yes	Event type.
category	string	no	Category related to the generated event.
serverTimestamp	long	yes	Server timestamp.
browserPageID	string	yes	The browser page ID.
globalVisitID	string	yes	Global Visit ID<ref name="guid"/>.
url	string	yes	The url of the page.
timestamp	long	yes	Timestamp.
pageID	string	yes	ID<ref name="guid"/> of the associated page resource.
sessionID	string	no	ID<ref name="guid"/> of the associated session resource.
data	string[]	no	Additional JSON data, specific to the event.
