Get Information About Your Application

After you have started your Web Engagement Frontend and Backend servers, you can explicitly request version information from the servers.

To get this information, you should send a GET HTTP request to the appropriate URL for the Frontend or Backend server.

Frontend Server

URL: `http(s)://<frontend_server_host>:<frontend_server_port>/frontend/about`

```
======================================================
Build info:
======================================================
Archiver-Version: Plexus Archiver
Build-Jdk: 1.6.0_27
Build-Number:
Build-Started-At: 20140618-0041
