# Log In

## Contents

- [1 Log In](#)
  - [1.1 Getting Started](#)

In this lesson, you will learn how to launch the Interaction Workspace application from your workstation, provide authentication information, and log in to your system. This lesson contains the following section:

- **Started Getting Started**

## Getting Started

To begin accepting interactions, you first must be authenticated on your network, and then you must log in to your system. The following procedure describes how to start Interaction Workspace and authenticate yourself on the system.

### Lesson: Logging in to Interaction Workspace

- To authenticate yourself on the system and choose your channels.

#### Prerequisites

- Your workstation is running a supported operating system.
- Your workstation has a supported browser application installed.
- You are configured as an agent.
- The Interaction Workspace is installed on your workstation.

#### Start

1. (SIP only) Plug in your USB headset.

Note: Depending on the configuration of your environment, your volume settings from your previous session might be retained when you log out, and they are used when you log in.

2. Start the Interaction Workspace application by doing one of the following steps:

- Double-click the Interaction Workspace icon on your workstation desktop.

- Open the Start menu and choose Interaction Workspace from the Genesys Telecommunications Laboratories program group.
- Select the Interaction Workspace ClickOnce web link that was provided to you by your system administrator.

3. In the Login view, enter your user name and password (see the Initial login view figure).

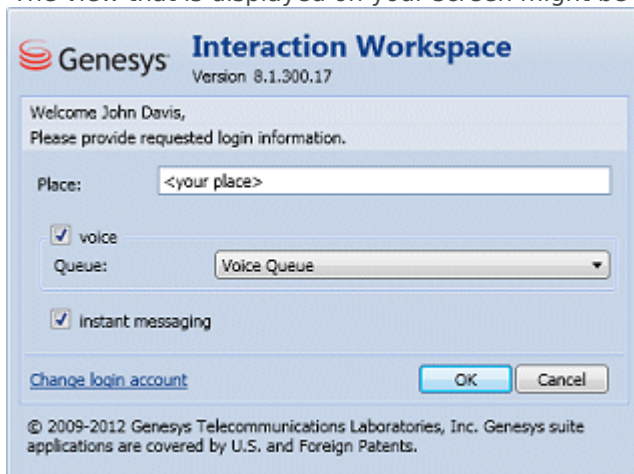

Initial login view

In some cases, you might be required to enter additional information about the application that you want to use and about the host and port from which the application is being served. For more information, see your system administrator and the *Interaction Workspace 8.1 Help*.

Note: Depending on the configuration of your environment, if you login to a SIP Voice channel without having your configured USB headset plugged in, you might be logged in to Interaction Workspace, but not to the SIP Voice channel. To complete logging in to the SIP Voice channel, plug in your USB headset.

4. Click **Log In** to log in, or click **Cancel** to stop logging in; this closes the Login view.
5. After you have successfully logged in, a new view opens in which you can specify additional information, based on the tasks that you want to perform. The contents of the view are defined by your administrator; they are specific to your role. Additional information that you might have to specify includes your Place, your queue, your agent login, your agent password, your phone number, and the media (such as Voice, Instant Messaging, or workitems, such as faxes) that you want to use. The "Example of the System Parameters login view" figure shows an example of a secondary login view. The view that is displayed on your screen might be different.

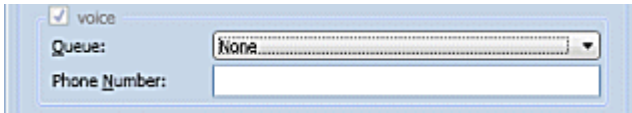

Example of the System Parameters login view. Your view might be different.

- You might be configured to check and uncheck eServices media channels, such as chat, SMS, e-mail, social media (for example, Facebook and Twitter), and workitems (such as fax). Upon login, unchecking media channels for which you are configured means that you will not be logged into those channels when Interaction Workspace starts. You will have to login to those channels manually from the Workspace view in the Main Window or Gadget.  
Note: If you are logging in to participate in an Outbound Campaign, you must unselect the Instant

Messaging channel.

- If your company is using a SIP Server, you might be configured to log in by using a remote phone number at which you can be reached if you are not logged in from a phone that is on the internal phone system of your company (see the Remote phone number field in the System Parameters login view figure).  
If you are logging in remotely, enter the remote phone number to which your calls will be routed in the Phone Number box in the System Parameters Login view.

A screenshot of a software interface for system parameters. It features a checkbox labeled 'voice' which is checked. Below it, there is a 'Queue:' label followed by a dropdown menu currently showing 'None'. Below that is a 'Phone Number:' label followed by an empty text input field.

Remote phone number field in the System Parameters login view

6. Click OK to submit your information. Click Cancel to stop logging in; this closes the Login view.
7. If authentication is successful, the Main Window view or Gadget is displayed. If your status is configured to be set to Ready by default, you are ready to receive interactions that are routed to you. Your system administrator specifies what your status is for each channel when you login. If you are configured to be Not Ready for one or more channels, your system administrator might specify a Not Ready Reason for the channel. To start receiving interactions on a Not Ready channel, you must change the status to Ready.

**End**

### Next Steps

- Set your status to Ready. See [Lesson: Going Ready in the Interaction Workspace Main window](#).
