## Learn about the Chat Commands

The chat commands presented in this page are restricted to chat interactions. However, chat interactions are extended open media interactions and can be used as such in open media commands. In addition to the chat commands, you can use:

- [Open Media](#) to place interactions in a given queue, move them to workbins, and so on.
- [Manage Toaster](#) which also deals with chat interactions.
- [Manage Open Media](#) to manage the chat media.

Read [Use Customizable Commands](#) to see code snippets which demonstrate the usage of the commands.

## Managing Chat Interactions

The commands presented in this section are specific to chat interactions and cover the following features (this list is not exhaustive):

- Accept or decline a chat session;
- Make chat consultations or transfer the session;
- Release a party;
- Close or leave the session.
