# Hiding selected data in logs

Workspace enables you to specify and filter the contents of the application logs. You can choose to hide content by using asterisks or to skip specific key-value pairs.

Use the options in the `log` section to configure the way in which logs are filtered.

- `log.default-filter-type`: Specifies the default filter type for logging.
- `log.filter-data.<keyName>`: Specifies the treatment of log data. This option enables you to filter for specific attached data keys, by specifying the key name in the option name. This option overrides any values specified by the `log.default-filter-type` option.
