CAPTURE\_POINT Dimension

12/19/2025

## CAPTURE\_POINT Dimension

Tasks are captured through a capture point that is configured in iWD GAX Plug-in. Capture point information is stored in the CAPTURE\_POINT dimension which is populated from task information.

**The CAPTURE\_POINT Dimension**

| Field                         | Data Type    | Description                                                                                                   |
|-------------------------------|--------------|---------------------------------------------------------------------------------------------------------------|
| CAPTURE_POINT_KEY             | int          | Primary key of this table.                                                                                    |
| CAPTURE_POINT_CONFIG_ID       | int          | iWD GAX Plug-in ID for the capture point.                                                                     |
| CAPTURE_POINT_CONFIG_EVENT_ID | int          | Event that created or updated the capture point record.                                                       |
| CAPTURE_POINT_RUNTIME_ID      | varchar(255) | iWD GAX Plug-in runtime ID for the capture point.                                                             |
| TENANT_KEY                    | int          | Key to the <b>TENANT dimension</b> , identifying the tenant with whom the capture point is associated.        |
| SOLUTION_KEY                  | int          | Key to the <b>SOLUTION dimension</b> .                                                                        |
| CAPTURE_POINT_NAME            | varchar(255) | Descriptive name of the capture point.                                                                        |
| CAPTURE_POINT_TYPE            | varchar(255) | Type of capture point, such as Web Service Capture Point, Database Capture Point, and XML File Capture Point. |
| CREATED_ETL_AUDIT_KEY         | int          | Key to the <b>ETL_AUDIT dimension</b> , identifying the ETL job that created this record.                     |
| UPDATED_ETL_AUDIT_KEY         | int          | Key to the <b>ETL_AUDIT dimension</b> , identifying the ETL job that last updated this record.                |
| VALID_FROM                    | datetime     | The date from which this capture point is valid.                                                              |
| VALID_TO                      | datetime     | The date until which this capture point is valid.                                                             |
| VERSION                       | int          | Version of the record.                                                                                        |
