Genesys Mobile Services

Callback Service Options

4/21/2025

Callback Service Options

You can create customized Callback services by adding a `service.servicename` section to your GMS configuration or by adding a new Callback service in the [Service Management UI](#), and then setting the appropriate options within. This page lists the options to use to fine-tune your Callback services.

- For more information, refer to Callback documentation in the [Callback Solution Guide](#).
- For details about overwriting configuration in Callback queries, refer to the [Callback Services API Reference page](#).

Options for this component are contained in the following configuration sections:

- [Chat](#)
- [General](#)
- [Notification](#)
- [no category](#)
- [Queue Management](#)
- [Reporting](#)
- [Scheduled Call](#)
- [URS Queueing](#)
- [Voice - User Originated](#)
- [Voice - User Terminated](#)
- [Voice Treatment](#)

Tip

In the summary table(s) below, type in the Search box to quickly find options, configuration sections, or other values, and/or click a column name to sort the table. Click an option name to link to a full description of the option. Be aware that the default and valid values are the values in effect with the latest release of the software and may have changed since the release you have; refer to the full description of the option to see information for earlier releases.

Power users: [Download a CSV file](#) containing default and valid values and descriptions.

The following options are configured at the application level (in other words, on the application object).

Section	Option	Default	Changes Take Effect
Chat	_chat_endpoint		Immediately
