gvp.rm Section

- **aor**
- **port-capacity**
- **redundancy-type**

aor

Default Value:

Valid Values:

Changes Take Effect: At start/restart

This parameter specifies the SIP service address of the resource. The format is sip[s]:<host>:port

port-capacity

Default Value: 500

Valid Values:

Changes Take Effect: At start/restart

This parameter specifies maximum port capacity of the resource. The number of active SIP sessions to the resource will not be allowed to exceed this capacity.

redundancy-type

Default Value: active

Valid Values:

Changes Take Effect: At start/restart

This parameter specifies the redundancy type of the resource. If all of the active redundancy type resources are up, then only the resources with the active redundancy-type will be used. If any one of them are down, then passive redundancy type resources will also be used.
