Reporting and Analytics Aggregates

schedule Section

schedule Section

- [aggregate-duration](#)
- [aggregate-schedule](#)
- [run-aggregates](#)

Use the schedule section of a Genesys Info Mart application to schedule the extraction, transformation, loading, and aggregation of data. This section must be named **[schedule]**.

Other options that you can configure in the [schedule] section are described in the [Genesys Info Mart Configuration Options Reference](#). You can use the [Reporting and Analytics Aggregates User's Guide](#) to learn how to configure continuous aggregation in integrated mode without having the aggregation process terminate for any period of time.

aggregate-duration

Default Value: 23:00 (23 hours)

Valid Values: HH:mm, where HH represents the number of hours (0-24) and mm represents the number of minutes (0-59).

Changes Take Effect: Immediately

Specifies the length of time within a 24-hour period that the aggregation process will run after it has been launched by the scheduler. The **run-aggregates** configuration option must be set to **true** and the **aggregate-schedule** must be set appropriately.

aggregate-schedule

Default Value: 0 1 (once a day starting at 1:00 AM)

Valid Values: Valid CRON expression of two fields

Changes Take Effect: Immediately

Specifies the schedule that determines when the aggregation process will start. The **run-aggregates configuration** option must be set to **true** in order for this option to take effect.

Examples:

- A value of 0 0 launches the aggregation process once a day at 00:00.
- A value of 0 0,3/2 launches aggregate process once a day at 00:00, 03:00, and every 2 hours thereafter.

run-aggregates

Default Value: true

Valid Values: true, false

Changes Take Effect: Immediately

Specifies whether to start the aggregation process at the scheduled time (as determined by the **aggregate-schedule** configuration option).
