Performance DNA Administrator Guide

Filtering View of Learning Items

5/1/2025

Filtering View of Learning Items

Performance DNA supports a range of options to filter the display of Learning Items, including restricting the items shown based on the user who created them (i.e. either display all Learning Items or just those created by currently logged in user), constraining by date created range, and choosing whether to include archived Learning Items. It is also possible to search for a specific Learning Item by entering a set of keywords in the **Search Learning Items** text box and clicking the **Search** button.
