The tables in this section show the list of source metrics displayed on the user interface. This section also shows how some of the source metrics are translated into calculated metrics which are displayed on the UI. These metrics are defined in the FA\_Threshold\_Patterns and FA\_State\_Metrics tables for performance and state metrics respectively.

The Type column defines whether the metric is sourced directly from a source metric (raw), or whether it is calculated from a set of source metrics (calc). The Calculation column states the formula used to calculate the metric using the source metric value defined for the agent. The team and supervisor calculations are based on the source metric value defined for all the agents under the respective team or the supervisor.

For multimedia metrics the metric internal names contain prefixes indicating the following:

- w —web chat
- e —e-mail

Multimedia metrics (e-mail & web chat) are available only in a Genesys environment.

## Metrics for Agents

The following Tables show state and performance metrics (voice and multimedia) displayed for agents.

### State Metrics Displayed for Agents

The following Table shows state metrics displayed for agents.

Metric	Type	Calculation
<div><div>NEW</div><div>DN (AgentDN)</div><div><div>Tip</div><div>The DN metric is disabled by default. To display agent DN information on the FA supervisor dashboard, ensure you enable the metric in the Metric Manager.</div></div></div>	Raw	N/A
Login Time (loginT)	Raw	N/A
State (state)	Raw	N/A
Time In Current State (stateT)	Raw	N/A
Current Skill Group (sg) (Cisco only)	Raw	N/A
Call Type (service) (Cisco only)	Raw	N/A

Agent ID, Alert State, and Agent Skills display in the Column Chooser with other agent state metrics, but they are not source metrics. Agent ID is part of the agent information fetched when FA loads the hierarchy. Alert Status is based on the number of rule violations for an agent. Agent Skills is the list of skills assigned to an agent in the Configuration Server.
