Contact Center Advisor and Workforce Advisor Administrator User's Guide

Regions

12/19/2025

Contents

- 1 Regions
 - 1.1 Region Types
 - 1.2 Adding/Deleting a New Region
 - 1.3 Configuring a Region's Attributes in Advisors
 - 1.4 Removing a Region from Advisors Configuration

Regions

This section describes how to configure regions in the Pulse Advisors administration module. The following screenshot shows the **Regions** page.

Regions

Name ▲	Configured	Type	Zero Suppressed
ABCD	No	Reporting	
ABCD	No	Operating Unit	
abcd	No	Operating Unit	
abcd1	No	Operating Unit	
ABCD1	No	Reporting	
ABCD1	No	Operating Unit	

Display **15** records per page.

Regions Page in the Administration Module

Region Types

In the pane, alerts are shown in relation to a geographic region. CCAdv and WA filter alerts by the user's permission to see the geographic region associated with the alerts. So, to see alerts in the alerts pane, you must have permission to the alert's corresponding geographic region, as well as the contact center and application group related to the application or contact group that displays the violation.

Adding/Deleting a New Region

New regions must be added in Genesys Administrator. Adding and deleting regions cannot be performed in the Advisors administration module. However, you can make a region inactive, or remove it from the Advisors configuration.

To add a new region in Genesys Administrator, or to delete a region, see [Advisors Business Objects](#).

Configuring a Region's Attributes in Advisors

To edit a region's active status and zero suppression status, select the region in the upper panel and edit these details in the **Edit** panel. Alternatively, locate the region in the list by typing the first few letters of its name in the **Search** field, click **Search**, and then select from the list. When your edits are complete, click **Save**.

The **Name** and the **Type** fields cannot be edited. These values are configured in Genesys Administrator.

Complete the fields in the **Edit** panel as follows:

- **Active:** Select whether the status of the region is active or inactive.
 Starting with Advisors release 9.0.0, regions are loaded into the Advisors administration module in the "active" state by default. In other words, as soon as a region is loaded into the administration module, it is available for use in the configuration of applications and agent groups.

When you make a region inactive, it remains available to use in configuration and the configurations in which it is used do not change, but CCAdv and WA do not use the region when calculating data for the dashboards.
- **Zero Suppressed:** You can select Yes for regions where little or no activity is expected. See [Zero Suppression](#) for details.

When you have made the **Edit** panel selections and saved them, the following happens:

- If the region has been newly created in Genesys Administrator, the **Configured** field changes to Yes to indicate that the configuration is now complete on the Advisors side.
- An Updated Successfully message displays at the top of the page.
- The **Remove from Advisors configuration** button is activated.

 If a region is removed from your Genesys configuration interface (such as Genesys Administrator), the following happens:

- The region **Active** column shows No.
- The **Edit** panel shows the following warning :
This region has been removed from Configuration Manager.

Removing a Region from Advisors Configuration

To remove the region from the Advisors configuration, click the **Remove from Advisors Configuration** button. This removal is not synchronized back to Configuration Server. The region continues to be present in the regions list, but displays as not configured and not active. The region completely disappears from the list only after if it is deleted from Genesys Administrator.

Important

Before removing a region from the Advisors configuration, you must remove its assignment from contact centers and configured applications and contact groups.
