Performance Management Advisors Deployment Guide

Health Check API for the Platform Web Services Node

5/1/2025

Health Check API for the Platform Web Services Node

The Advisors Web services provide an API to check the health of the Web server nodes. For example, if you have installed Pulse Advisors release 9.0.000, you can configure the load balancer to access the `http://<host:port>/adv/rest/health` URL to check the health of an Advisors Web services node. **NEW** That URL changes to `http://<host:port>/adv/health` starting with Advisors release 9.0.001. In either case, it is an unauthenticated resource; it can be accessed without first logging in.

The service returns an HTTP status code of 200 when the Web server is up and running. The service returns a non-200 HTTP status code when the Web server is not reachable.
