# Genesys Engage cloud Supervisor's Guide

Answer incoming calls (v8)

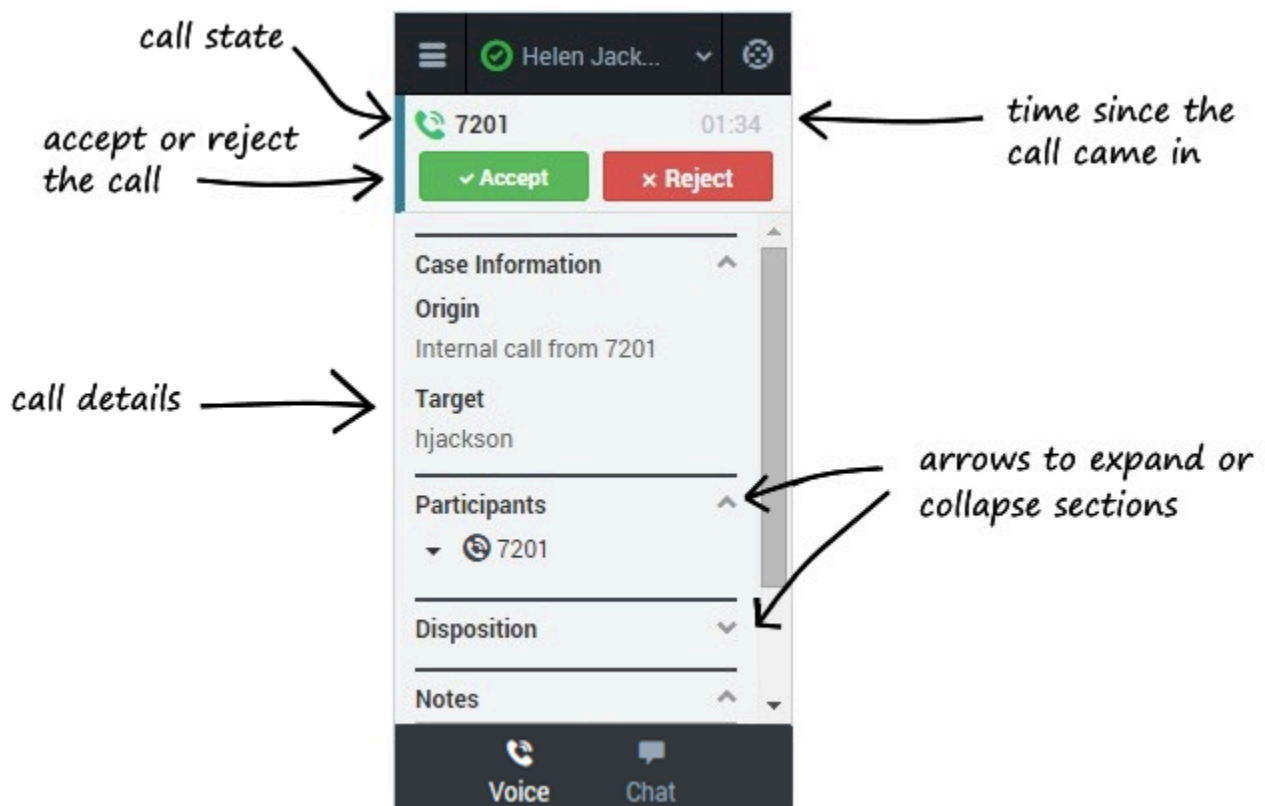

## Answer incoming calls (v8)

### Important

This content may not be the latest Genesys Engage cloud content. To find the latest content, go to [Genesys Engage cloud for Supervisors](#).

You can start receiving calls as soon as you **set your status** to **Ready** on the voice channel in the Gplus Adapter for Salesforce.

How do I accept a call?

When you get a call, the adapter's incoming call screen displays. You can **Accept** or **Reject** the call,

see the amount of time since the call came in, and see the call's state. You also see the call details area, which displays sections for **Case Information**, **Participants**, **Disposition**, and **Notes**. You can review this information before deciding whether to accept or reject the call. Take a few moments to identify the components of the incoming call screen.

Another visual indicator that you have calls waiting is a red circle with a number displayed on the **Voice** icon at the bottom on the adapter. The number indicates how many invitations are pending. This is useful for when incoming calls are waiting for you while you are on another screen in the adapter or working in another channel.

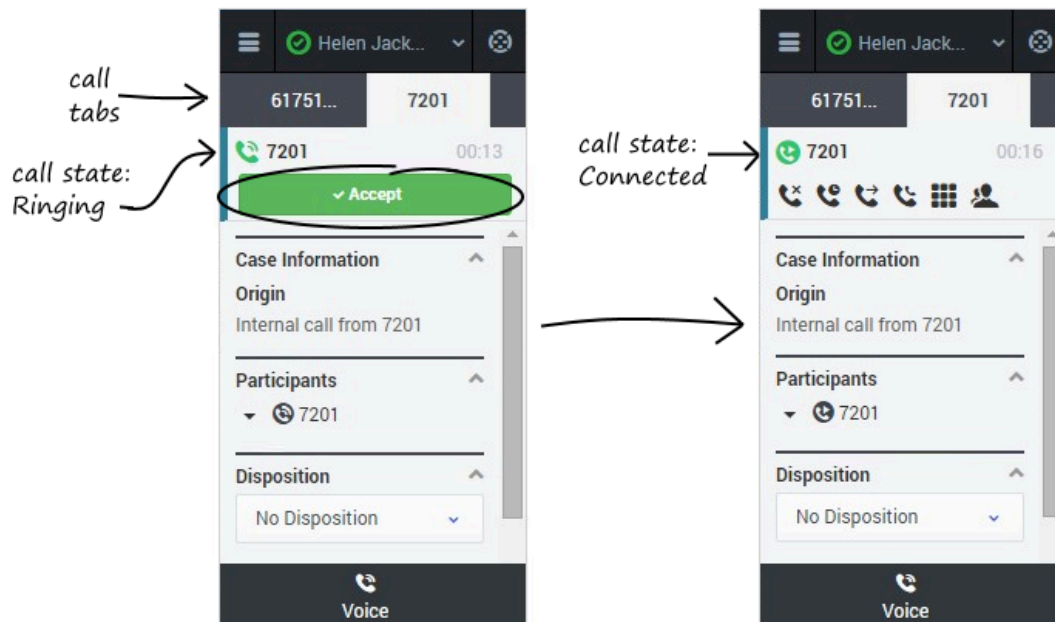

If you reject the call, you'll be taken back to the main view for the voice channel. If you accept the call, you'll see a list of **Call Actions** you can take in the call toolbar area.

### Important

If your administrator has configured it, you might also see related information about the caller in Salesforce. This information might be displayed either while the call is ringing or after you click **Accept**. For example, if the caller already exists in the Salesforce contact database, you might see the Edit Contact screen.

You can work with the standard **call actions**, or you can modify the call data by setting the **disposition** or adding **notes** about the call.

## How do I accept a second call?

While you're on an active call, you might get another unrelated direct call from someone else. If this happens, the adapter opens a new tab and shows you the same call overview information with the option to accept.

### Tip

You don't see **Reject** in this scenario because rejecting a call puts it back in the system so it can be routed to another available agent. We don't want that to happen if someone is trying to call you directly.

As soon as you accept the new call, the adapter puts your original call on hold. You can go back to your original call by selecting the corresponding tab and clicking **Retrieve** —this puts your second call on hold. If you have more than two active calls, the rest are displayed in a dropdown list next to the tabs.
