TCallType

Syntax

```
typedef enum {  
    CallTypeUnknown,  
    CallTypeInternal,  
    CallTypeInbound,  
    CallTypeOutbound,  
    CallTypeConsult  
} TCallType;
```

Values

- `CallTypeUnknown` — The type of this call is unknown.
- `CallTypeInternal` — This is an internal call (between two DNs on the local switch).
- `CallTypeInbound` — This is an inbound call (from an off-PBX number).
- `CallTypeOutbound` — This is an outbound call (to an off-PBX number).
- `CallTypeConsult` — This is a consultation call (initiated on the local switch), regardless of what DNs participate in the call.

Comments

`CallType` is determined with respect to the local switch only. In multi-site environments the `CallType` of a call may be different for each of its different legs. For example, one T-Server may report a call as an Outbound or Consult call, but on the receiving end this call may be reported as Inbound.
