## TInitiateTransfer

### Description

On behalf of the telephony object specified by the parameter dn, places the existing call specified by the parameter conn\_id on hold and originates a consultation call from the same telephony object to the called party, which is specified by the parameter destination for the purpose of a two-step transfer.

#### Parameters

Name	Description
server	Local server handle to the T-Server in question.
dn	Directory number of the telephony object that initiates the conference.
conn_id	Connection identifier of the call that is requested to be placed on hold.
destination	Directory number of the party to be dialed.
location	Name of the remote location in the form of <switchname> or <t- ServerApplicationName&gt;@<switchname>.</switchname></t- </switchname>
user_data	A pointer to the user data that should be attached to the call.
reasons	A pointer to a data structure that provides additional information associated with this action.
extensions	A pointer to an additional data structure. TInitiateConference() uses the following extension: ConsultUserData.

#### Return Values

Standard (See standard-return-values.)
