# Contents

# TNetworkPrivateService

## Description

Initiates a request to perform a device-specific service.

## Parameters

| Name | Description |
|------|-------------|
| server | Local server handle to the T-Server in question. |
| serviceID | Service identifier for the information being passed. |
| ctrl_dn | DN of the controlling party, for a premise T-Server, or the route point where the call was initially routed, for a network T-Server. |
| conn_id | Connection ID of the call in question. |
| home_location | A pointer to the name of the remote location that carries out the request in the form of <SwitchName> or <T-ServerApplicationName>@<SwitchName>. |
| reasons | A pointer to a data structure which provides additional information associated with this action. |
| extensions | A pointer to an additional data structure. |

## Return Values

Standard (See standard-return-values.)
