TQueryLocation

Description

Allows a client to receive information specified by the `info_type` parameter about one or more remote locations specified by the `location` parameter. T-Server generates an `EventLocationInfo` in response to the function `TQueryLocation()`.

Parameters

| Name | Description |
|-------------------------|---|
| <code>server</code> | Local server handle to the T-Server in question. |
| <code>info_type</code> | The type of requested information. |
| <code>location</code> | The name of the location in question. |
| <code>extensions</code> | Reserved for future use. For forward compatibility, set this parameter to <code>NULL</code> . |

Return Values

Standard (See [standard-return-values](#).)
