CfgSolutionComponentDefinition

Description

CfgSolutionComponentDefinition lists the types of applications whose functionality this solution uses.

Attributes

- startupPriority — The default number of the solution component in a component startup sequence within solution. `StartupPriority` value should be used to determine the order in which components should be started and stopped. The value defined as default could be changed at time of `SolutionComponent` definition. Must be defined as positive integer. Mandatory. Must be shown as the `READONLY` property in an object of type CfgService (Solution).

- isOptional — Determines whether this solution component default value is optional. Recommended to be set to `CFGFalse` by default. Must be shown as `READONLY` property in object of type CfgService (Solution).
    Refers to CfgFlag.

- type — Type of the application that is used as solution component. Mandatory. Once specified, cannot be changed. See CfgAppType.

- version — A pointer to the application version that is used as solution component. Once specified, cannot be changed.
