TKVListAddBinary

Description

Adds one data item of binary type (that is, a specified number of unsigned characters), specified as the parameters `key` and `value`, to the data structure specified by the parameter `list`.

Syntax

```
TKVResult TKVListAddBinary(  
    TKVList *list,  
    char *key,  
    unsigned char *val,  
    int length  
);
```

Parameters

For basic type information for each parameter, consult the Syntax section, above.

Name	Description
<code>list</code>	A pointer to the data structure to which the specified key-value pair should be added.
<code>key</code>	A pointer to the string representing the parameter name.
<code>val</code>	A pointer to the value of the parameter specified by the parameter <code>key</code> .
<code>length</code>	The length of the parameter specified by the parameter <code>val</code> .

Return Values

Refer to the type `TKVResult`.
