## Resolved Issues

This release contains the following resolved issues:

---

Genesys Info Mart migration job now updates **END\_TS** columns for active records from 2025-12-31T23:45:00 to 2037-12-31T23:45:00 in all related Fact tables. Previously, migration job updated these columns only in Configuration Fact tables. This leads to different issues where **END\_TS** was 2025-12-31T23:45:00 but active **ACTIVE\_FLAG** was set to 0.

**Rollback:** In addition to the standard rollback procedure, run the **rollback-2037-to-2025.sql** script from the GIM installation folder corresponding to your DBMS.

To update database that customer uses to consume GIM export data, run the **update-2025-to-2037.sql** script from the GIM installation folder corresponding to your DBMS. (GIM-14884)
