 - 1.4 Upgrade Notes

What's New

This release includes only resolved issues.

Resolved Issues

This release contains the following resolved issues:

Chat Server no longer stops sending notifications to a CometD-enabled session when the user connects to a different GMS node. Previously, when a user switched their CometD-enabled session to a different GMS node, Chat Server sometimes stopped sending notifications after the original GMS node detected a user disconnect. (GMS-6939)

GMS no longer experiences a delay during startup. Previously, GMS installations with large Genesys configuration environments could take several minutes to start. (GMS-6884, GMS-6915)
