 - 1.1 Helpful Links
 - 1.2 What's New
 - 1.3 Resolved Issues
 - 1.4 Upgrade Notes

What's New

This release contains the following new features and enhancements:

- Support for the new Capacity Provisioning API which provides CRUD operations on the Capacity Service. See the [documentation](#) for further details.
- The option StorageService has been added to enable recurrent logs about session and storage. Note that this option is not enabled by default.

Resolved Issues

This release contains the following resolved issues:

The performance of statistics events processing has been improved. Now, when GMS processes statistics events received from Stat Server, GMS first stores events in its local cache and then asynchronously stores the event values in Cassandra. (GMS-7687)

The Jackson Databind third-party library (from fasterxml.com) has been updated to solve the CVE-2019-12814 vulnerability. (GMS-7682)

Now, GMS is able to process CORS requests even when Basic Authentication is required at the same time. (GMS-7695)

Upgrade Notes

Further instructions are available in the [upgrade](#) section of the *Genesys Mobile Service Deployment Guide*.
