What's New

This release includes only resolved issues.

Resolved Issues

This release contains the following resolved issues:

GMS now correctly hides custom data configured in the [log-filter-data] section of the GMS configuration. Previously, custom data was not always properly hidden in requests from GMS to ORS. (GMS-7900)

If you try to create an immediate callback using the Admin UI while the ORS server is down, the Admin UI now displays an error message. (GMS-7872)

Capacity Provisioning API now properly provisions options in Configuration Server. (GMS-7870)

Now, if the `_status_notification_target` parameter is set to a malformed URL, the callback created through an API request is no longer stuck in an invalid state preventing the cancellation of the callback request. (GMS-7843)

Storage API now properly returns application/json empty responses. (GMS-7824)
