What's New

This release includes only resolved issues.

Resolved Issues

This release contains the following resolved issues:

Recording Crypto Server no longer runs out of memory when archiving recordings, since it now collects them in batches instead of all at once. The size of each batch can be configured using `archive.block-size`. The default value for `archive.block-size` value is 5000. (GIR-4725)

Recording Crypto Server can now correctly playback encrypted recordings that have the wrong padding at the end when using Java 1.7.0_71 and higher. (GIR-4579)

Upgrade Notes

No special procedure is required to upgrade to release 8.5.040.98.
