Resolved Issues

This release contains the following resolved issues:

Screen Recording Service (SRS) now completes a screen recording when the recording is paused or resumed. Previously, in version 8.5.365.01 or higher, SRS encountered an error and failed to complete a recording when the recording was paused or resumed. (GIR-26010)

Screen Recording Service (SRS) now uses shorter names to store encryption certificates. Previously, SRS could encounter I/O errors due to long filenames of encryption certificates. (GIR-25628)

Screen Recording Service (SRS) now has an increased default value of 10 seconds as the VLC HTTP timeout. Additionally, the **vlcHttpTimeout** parameter is introduced to allow users to adjust this timeout. Previously, SRS failed to complete a recording due to a *VLC Http stop failed with ConnectTimeout* error. (GIR-25170)

Screen Recording Service (SRS) no longer encounters a **recorder.pyc** error. Previously at times, SRS did not record an agent's screen when there were back-to-back login and logout requests. (GIR-26155)
