Resolved Issues

This release contains the following resolved issues:

While reconnecting to Configuration Server, T-Server/SIP Server now correctly repeats attempts to re-read connection parameters of the remote T-Server/SIP Server from Configuration Server until success. Previously, after reconnection to Configuration Server, if the attempt to re-read the configuration resulted in an error, the connection between SIP Servers (through ISCC) might not be restored. (TS-12101)
